

Python Search Engine Project - README

Project Overview:

This project is a simple Python-based Search Engine web application.

It allows users to upload files and search through indexed content efficiently.

Project Structure:

- indexdir: contains indexed data for search engine
- static: CSS, JS, images
- templates: HTML pages (frontend)
- uploads: uploaded files by users
- app: main backend application (Flask or similar)
- README_Python_Search_Engine: project documentation

Features:

- File upload system
- Text indexing
- Search functionality
- Simple web interface

How to Run:

1. Install dependencies (Flask, etc.)
2. Run app.py inside the app folder
3. Open browser at <http://127.0.0.1:5000/>

Notes:

Make sure indexdir folder has proper permissions and is writable.
